

Starburst Front-End/Full-Stack Engineers

develop high quality and cutting edge software

We are the Presto company --- At Starburst, our team is a major contributor to the open source Presto¹ project. We consist of many of the experts and committers who have been contributing to and advancing the Presto product over the last few years. Originally invented and open sourced by Facebook under the Apache License, Presto is the fastest growing SQL engine driven by a community of users --- from small companies to the Fortune 500.

Starburst is looking for front-end/full-stack engineers to work on our team in Warsaw. Our team features very strong software engineering talent, with years of core database engine and distributed systems development experience. As a front-end/full-stack engineer you'll be designing and implementing the core of Starburst products for running analytics on dedicated hardware, as well as in private and public clouds (Amazon AWS, Azure, Google Cloud Platform, Kubernetes).

Responsibilities

- Design and develop components to the Starburst products for Presto
- Lead projects from concept to completion
- Write tests and contribute to ongoing automation infrastructure development
- Collaborate with teams globally across multiple time zones and operate in an Agile development environment
- Provide exceptional customer support and be part of the support rotations for 24/7 customer escalations

Requirements

- **Be Smart and Get Things Done**
- Proficiency in ES8 (ECMAScript 2017)
- 3+ year experience using front-end frameworks such as Angular, Backbone or React
- Comfortable with modern HTML and CSS technology stack
- Experience (or wants to learn) developing RESTful backend services in Java

Pluses

- Experience with AWS, Azure, and/or Google Cloud Platform
- Experience with Hadoop, Spark, Docker
- Comfortable in scripting languages
- Experience with usability and user experience

Location

¹ <https://github.com/prestodb/presto>

This position is located in Warsaw (Poland).

About Starburst

Starburst gives analysts the freedom to work with diverse data sets wherever the data lives, without compromising on performance. Using the open source Presto SQL engine, the Starburst Distribution of Presto provides fast, interactive query performance across a wide variety of data sources including HDFS, Amazon S3, MySQL, SQL Server, PostgreSQL, Cassandra, MongoDB, Kafka, and Teradata, among others. Founded by the largest team of Presto committers outside of Facebook, Starburst is the only company providing enterprise support for the Presto project. Candidates should relish the opportunity to shape a cutting-edge technology while working in the fun, collaborative environment of a fast-paced startup.
